SURFACE MOUNT LED LIGHTING

The **PHOTON** series is a surface mounted light that offers you more for less!

Utilising the same LED technology as the **QUANTUM** & **ATOM** range, the **PHOTON** provides intense illumination and brilliant colour shows while reducing the installation costs usually associated with niche lighting.

Like all Spa Electrics LED products, the **PHOTON** series utilises an external heat sink for maximum LED performance and is available in a choice of single and Multi-Colour formats.

The **PHOTON** Series is designed and manufactured in Australia and backed by Spa Electrics' industry leading customer care network. For more information on the **PHOTON** Series and our other products, please visit: www.spaelectrics.com
